U.S. Patent Application Serial No. 09/841,421  
Draft New Main Apparatus Claim

27. A delivery box adapted to be built into an external  
5 wall of a building and having an outer door which is  
(provided with a digital computerised locking system) adapted  
to be operated only by a pre-arranged single-use access  
code) whereby said door can be opened and deliveries placed  
inside the box, said system being also adapted, when said  
10 door is then closed to lock automatically and to cancel  
the code used for opening said door after every use; and a  
rear door openable directly into, and lockable from, the  
interior of the building.

single (use) access  
(code)
